(54) CARRIER COMPOSITION FOR PHOTOSENSITIVE TONER

(57) Abstract:

PURPOSE: To obtain almost equal charge of each photosensitive toner when a full-color image is formed with one exposure by using photosensitive toners of two or more colors, and thereby, to obtain a sharp full-color picture image with good color reproducibility.

CONSTITUTION: This carrier compsn. is used to form a full-color picture image with one exposure by mixing photosensitive toners of two or more colors. This carrier compsn. contains at least two kinds of carriers showing opposite order of charges to each other for the photosensitive toners of two or more colors. The two kinds of carriers are mixed in a manner that deviation of charge in each photosensitive toner from the average charge is controlled within 10%.
